EDUCATION

Feb 2021 – July 2022

University of Portsmouth – Portsmouth, United Kingdom
Masters of Science in Information Technology

Sep 2016 – Aug 2020

National University of Modern Languages (NUML) – Islamabad, Pakistan
Bachelor of Science in Computer Science

RELEVANT WORK EXPERIENCE

Oct 2025 – May 2026

WMD Trading INC. – Baltimore, MD

Frontend Developer/IT Support Engineer

- Developed and maintained responsive company websites using WordPress, customizing themes, pages, and UI components with Custom CSS to improve usability, visual design, and performance across desktop and mobile devices while utilizing AI tools such as ChatGPT and GitHub Copilot to streamline development and content management tasks.
- Collaborated with internal teams to update website content, troubleshoot frontend issues, and ensure smooth functionality of web pages, plugins, forms, and integrations while maintaining consistent and modern design standards using AI-assisted development workflows.
- Provided technical support for software and hardware-related issues, assisting users with troubleshooting, system configuration, and resolving day-to-day IT problems to maintain operational efficiency.

May 2023 – Dec 2024

Insitech – Deira, Dubai

Frontend Developer

- Collaborated closely with backend developers to design and implement API-driven interfaces using React and Next.js. Integrated RESTful APIs for dynamic data rendering, ensuring smooth communication between frontend and backend services. Utilized React Hook Form, Zod, Shadcn/UI, Cursor, ChatGPT, and AI-assisted debugging tools to accelerate development, improve code quality, troubleshoot issues efficiently, and build scalable, type-safe, and consistent UI components.
- Developed and maintained responsive, high-performance user interfaces with TypeScript, Tailwind CSS, Bootstrap, and modern React patterns. Focused on accessibility, scalability, and cross-device optimization to deliver an exceptional user experience
- Managed complex application state using Redux Toolkit and handled asynchronous data flows with Redux Thunk, improving data consistency and ensuring real-time synchronization with backend APIs

Dec 2019 – Dec 2020

Capregsoft Limited – Wah Cantt, Pakistan

React Developer

- Developed user interfaces using React.js and Next.js for company projects
- Translated design mockups into interactive web components
- Implemented state management with tools like Redux and Context API and utilized Git/GitHub for version control

Below is a compilation of projects that I actively contributed to during my tenure:

- **MailAvail:**
 - Resolved a critical pagination bug in the MailAvail project

- **Capregsoft Leave Management Portal (internal project):**
 - Solely developed the HR portal for the internal Leave Management System
 - Designed and implemented 20+ UI components using React + Next.js tailored for an intuitive and efficient user experience
 - Integrated over 10+ APIs to manage various aspects of leave processing, optimizing data flow and communication between frontend and backend
 - Utilized Redux Toolkit for streamlined global state management, ensuring consistency and efficiency in handling application-wide data
 - Implemented asynchronous API calls using Redux Thunk, enhancing the portal's responsiveness and real-time data update

SKILLS

- **Programming Languages:** JavaScript, Java, TypeScript, Python, PHP, My SQL, C#, C++
- **Markup Languages:** HTML, CSS, XML, JSON
- **Operating Systems:** Windows, Kali Linux & Unix
- **IDE Tools:** Dev C, NetBeans, Visual Studio Android Studio, Jupyter Notebook, Adobe Dreamweaver, FTK Imager, Autopsy, XRY, XAMN Viewer
- **Frameworks:** React + Next.js (Redux toolkit), Bootstrap, Tailwind CSS, Spring Boot
- **Version Control:** Github, GiT

PROJECTS

- Below is a compilation of personal projects created using technologies such as React.js, TMDb API, React Router, HTML/CSS, JavaScript, TypeScript, Redux Toolkit, Tailwind, Next.js, Spring Boot, MongoDB, Java, Spring security, JWT, Clerk, and Firebase. I designed intuitive user interfaces with card-based displays for product listings, ensuring seamless navigation and interaction through proper routing and UI components

Master's Degree

An Optimal Feature Selection Approach for Artificial Intelligence (AI) Based DDoS Detection System – Academic

- Implemented an Ensemble Feature Selection (EN-FS) approach called Majority Voting (MV) to integrate the results of the separate Feature Selection (FS) methods and extract the best feature set using the CICDDoS-2019 dataset
- Fifteen FS methods were implemented to select an optimal number of features from the network parameters for an AI-based DDoS attack detector
- After implementing the ensemble of different FS techniques, the XGBoostModel's performance on the selected feature subset was evaluated
- Project was completed using Python on the Jupyter platform

Bachelor's Degree

English Language Learning System (Android Mobile Application) – Academic

- Developed an Android application using Java in the Android Studio environment to enhance users' English vocabulary. The app assessed users' proficiency levels through exams and displayed five advanced words daily based on their progress.
 - Designed a user-friendly interface with login and sign-up functionality and utilized a MySQL database to store and manage a large dataset of vocabulary words
-
