LinkedIn: www.linkedin.com/in/abdul-majid-9115082b7

SKILLS

- **Programming Languages:** JavaScript, Java, TypeScript, Python, PHP, My SQL, C#, C++
- **Markup Languages:** HTML, CSS, XML, JSON
- **Operating Systems:** Windows, Kali Linux & Unix
- **IDE Tools:** Dev C, NetBeans, Visual Studio Android Studio, Jupyter Notebook, Adobe Dreamweaver, FTK Imager, Autopsy, XRY, XAMN Viewer
- **Frameworks:** React + Next.js (Redux toolkit), Bootstrap, Tailwind CSS, Spring Boot
- **Version Control:** Github, GiT

EDUCATION

Feb 2021 – Aug 2022 **University of Portsmouth** – Portsmouth, United Kingdom

Masters of Science in Cyber Security and Forensic Information Technology

Sep 2016 – Aug 2020 **National University of Modern Languages (NUML)** – Islamabad, Pakistan

Bachelor of Science in Computer Science

RELEVANT WORK EXPERIENCE

Jan 2022 – Nov 2024 **Insitech** – Deira, Dubai

Full Stack Developer

- Developed scalable RESTful APIs using Spring Boot, integrating MongoDB with Spring Data for efficient data access, including pagination, sorting, and exception handling. Implemented secure authentication with JWT and role-based access control (RBAC) using Spring Security.
- Monitored and maintained application health via Spring Boot Actuator, managing cross-cutting concerns like transactions and logging with Spring AOP to enhance performance, reliability, and maintainability of backend services.
- Ensured seamless integration between backend and frontend by developing dynamic, API-driven user interfaces using React and Next.js. Created responsive and performant UI components, leveraging HTML, CSS, TypeScript, JavaScript, Tailwind CSS, Shadcn/ui and Bootstrap for an optimized user experience across devices.
- Utilized Redux Toolkit for global state management and Redux Thunk for asynchronous API handling, enhancing the efficiency of data flow and ensuring real-time updates between frontend and backend systems.

Dec 2019 – Dec 2021 **CapregSoft Limited** – Wah Cantt, Pakistan

React Developer

- Developed user interfaces using React.js and Next.js for company projects
- Translated design mockups into interactive web components
- Implemented state management with tools like Redux and Context API and utilized Git/GitHub for version control

Below is a compilation of projects that I actively contributed to during my tenure

- **MailAvail:**
 - Resolved a critical pagination bug in the MailAvail project during my initial role at the office
- **Body Doctor Gym:**
 - Collaborated with the team to develop the UI for the body doctor gym website and admin side. Utilized Redux Saga to seamlessly integrate APIs, enabling efficient data management and interaction between the frontend and backend systems
- **Capregsoft Leave Management Portal (internal project):**

- Solely developed the HR portal for the internal Leave Management System
- Designed and implemented 20+ UI components using React + Next.js tailored for an intuitive and efficient user experience
- Integrated over 10+ APIs to manage various aspects of leave processing, optimizing data flow and communication between frontend and backend
- Utilized Redux Toolkit for streamlined global state management, ensuring consistency and efficiency in handling application-wide data
- Implemented asynchronous API calls using Redux Thunk, enhancing the portal's responsiveness and real-time data update

Jan 2019 – July 2019

Mine Cube Technologies – Wah Cantt, Pakistan

Android Developer Internship

- Worked on a team for the design of functional and sustainable android mobile applications through the use of high performance, reusable, and reliable Java codes
- Developed a strong understanding of Android SDK, the open-source Android ecosystem, Android UI design principles, software product planning, and performance analysis
- Gained experience with Frontend Frameworks, RESTful APIs to connect Android applications to back-end services and cloud message APIs, and push notifications

PROJECTS

- Below is a compilation of personal projects created using technologies such as React.js, TMDb API, React Router, HTML/CSS, JavaScript, TypeScript, Redux Toolkit, Tailwind, Next.js, Spring Boot, MongoDB, Java, Spring security, JWT, Clerk, and Firebase. I designed intuitive user interfaces with card-based displays for product listings, ensuring seamless navigation and interaction through proper routing and UI components
- You may access my projects below using this github link:
<https://github.com/Majidabduluop>
- **Portfolio:** You can explore my projects and work in detail at my portfolio:
<https://abdul-portfolio.vercel.app/>

Master's Degree

An Optimal Feature Selection Approach for Artificial Intelligence (AI) Based DDoS Detection System – Academic

- Implemented an Ensemble Feature Selection (EN-FS) approach called Majority Voting (MV) to integrate the results of the separate Feature Selection (FS) methods and extract the best feature set using the CICDDoS-2019 dataset
- Fifteen FS methods were implemented to select an optimal number of features from the network parameters for an AI-based DDoS attack detector
- After implementing the ensemble of different FS techniques, the XGBoostModel's performance on the selected feature subset was evaluated
- Project was completed using Python on the Jupyter platform

Bachelor's Degree

English Language Learning System (Android Mobile Application) – Academic

- Developed an Android application using **Java** in the Android Studio environment to enhance users' English vocabulary. The app assessed users' proficiency levels through exams and displayed five advanced words daily based on their progress.
- Designed a user-friendly interface with login and sign-up functionality and utilized a MySQL database to store and manage a large dataset of vocabulary words.
